2010

Exercise A/ for the topic: Presentations

Create a Poster presentation

10 points

Create a poster presentation, which contains at least two sections, with subsections.
You can use the risc-sample-poster.tex as a template. (I commented very detailed the last version you can find in moodle.)

You have to change some objects in the poster structure (new colors, new headings for the sections, etc).

Header part of the poster: **2** points

- Logos: RISC logo: left, your photo: right
- Title: Using Debian Linux and KDE;
        your name; some additional text your choice;

Content of the poster:
1. Section: **2** points
    1. please use three screen shots you already generated in the exercises for Linux.
    2. please comment the screen shots with text.

2. Section: **3** points

    1. Generate some (at least two) screen shots about the KDE menu system, which shows the big number of applications which are available in Debian Linux in different topics, sections.
    2. Comment your screen shots with text.

3. Section: **3** points

    1. This section (with subsections) is user defined, but it must not be empty :-). You can create it about **any** topics you like (but no CBWE topics, please !), using - as always by the presentations - as much features of LaTeX, as you can. No limit to be creative !

Deadline: January 9, 2011.
