

Exercise for the topic: Presentations

Create a Poster presentation

Create a poster presentation, which contains at least three sections, with subsections. You can use the risc-sample-poster.tex as a template. (I commented the last version you can find in moodle very detailed.)

You should change some objects in the poster structure (new colors, new headings for the sections, etc).

Header part of the poster:

- Logos: RISC logo: left, your photo: right
- Title: Using Debian Linux and KDE;
your name; some additional text your choice;

Content of the poster:

1. Section:

1. please use three of the five screen shots you already generated in the exercises for Linux.
2. please comment the screen shots with text.

2. Section:

1. Generate some screen shots about the KDE menu system, which shows the big number of applications which are available in Debian Linux in different topics, sections.
2. Comment your screen shots with text.

3. Section:

1. This section is user defined, but it must not be empty :-), you can create it about any topics you like, using - as always by the presentations - as much features of LaTeX, as you can.

Deadline: January 15, 2009.
