

Exercise for the topic: Simple Image Processing (10 points)

There is no extra exercise for this topic, because for the exercises for the other topics of my talks you have to make use of the material in this topic.

Requirements to get the 10 points:

- for the exercise-poster you have to deliver the source latex code, too.
 - in this latex code you should use at least 5 different forms of the `includegraphics` commands optional parameter.
- you have to make in the other exercises three different types of screen shots: window under cursor, section of window, region of screen.
 - put these images in the directory `exercises/imageproc/` in your CBWE lecture home directory.

You will get for this virtual exercise the maximum points, if the requirements above are fulfilled.

Deadline: January 31, 2011.
