

2011

**Exercise for the Topic Mailing
10 points**

Use Icedove (Thunderbird) **in your RISC CBWE account** to read your emails at this account.

1. Create accounts in Icedove with the following configuration: (**4** points)

- create two email accounts
 - one for reading the emails by imaps
 - another email account for reading the emails by pop3s
- by creating the email account configure the following setting:
by the Server Information window unmark the field:
Use Global Inbox (store mail in Local Folders)
- set the outgoing mail server to smtpauthhost.risc.uni-linz.ac.at
(this server needs authentication: your RISC CBWE login and password will be asked, the connection is ssl based)
- create the following 3 email folders:
Debian, Mailing, SSH

2. Setup some filters: (**3** points)

- each email with the subject of a topics (as listed above) has to be moved to the appropriate folder.

Check the setup:

- send at least 3 emails to your RISC CBWE account with the topic names (Debian, Mailing, SSH) in the Subject and check, whether the filters work correctly.

Inform me per e-mail, if you finished the above settings, I'll send you some test emails

3. Create screen shots about the configuration of the email accounts: **(3 points)**

a- Icedove start page, where I can check the list of both email accounts and their folders

b- for both email accounts:

- Server Settings

c-- Outgoing Server

Save these 4 screenshots in the **exercises/mailing** directory as:

a- icedove-start.jpg

b- ppop-server.jpg

imap-server.jpg

c- outgoing.jpg

Deadline: January 15th, 2012.
