

Exercise for the topics: Simple Image Processing and Drawing Figures (5+5 points)

Simple Image Processing

There is no extra exercise for the topic, because for the exercises for the other topics of my units you have to make use of the material in this topic.

Requirements to get the 5 points:

- you have to make in the other exercises three different types of screen shots: window under cursor, section of window, region of screen.
- put these images in the directory `exercises/imageproc/` in your CBWE lecture home directory.

Drawing Figures

Create a the picture with `xfig`.

The picture should show a simple figure that describes some relationship (e.g. the interaction between a web server and a web client) by a couple of boxes labeled with text and connected by arrows; export this figure both as `.eps` and `.png`.

Create a small latex frame that includes the `.eps` file to show a single page with the image and generate a `.PDF` file from it.

Copy the `.eps`, `.png`, `.tex`, `.pdf` files to your CBWE lecture home directory under `exercises/imageproc/`

Deadline: January 21, 2014.
